

# THE ADVANTAGES OF **BIN TIPPER**

The Bin Tipper is a robust and versatile equipment designed to facilitate the lifting and tipping of bins and containers. Optimized for industrial applications, it improves operational efficiency and safety in high-intensity production environments.

# BIN TIPPER

The Coveser Bin Tipper is a hydraulic tipping system for bins, designed for the automatic and safe loading of loose products into large containers.

Perfect for feeding bunkers, hoppers, and conveyor belts, it is ideal for sectors such as fruit and vegetable processing, legumes, flours, and other bulk materials.

The reinforced structure and fluid hydraulic movement make this machine a reliable tool even for the most demanding applications.

## TECHNICAL FEATURES

- Powder-coated steel construction
- High load capacity (up to 2 tons)
- Hydraulic movement
- Electric control panel
- Continuous-use strength and durability
- Compatible with various bin formats

## ADDITIONAL FEATURES

- Adjustable loading platform
- Automatic discharge system
- Acoustic and visual warning signals
- Optional: Remote wireless control

## SYSTEM ADVANTAGES

- ✓ Operational efficiency
- ✓ Maximum flexibility
- ✓ Reduction of manual labor
- ✓ Automated control
- ✓ Maximum customization

The Bin Tipper is a robust and versatile equipment designed to facilitate the lifting and tipping of bins.

## SUITABLE PRODUCTS

The Bin Tipper is designed for all companies handling large volumes of bulk product, such as potatoes, onions, legumes, and granular materials.

It is ideal for controlled feeding of bunkers, hoppers, and processing conveyors, both in the agricultural and industrial transformation sectors.
