

THE ADVANTAGES OF **CONVEYOR BELTS**

Our conveyor belts are designed for the efficient handling of bulk products in the food sector, with particular attention to potatoes, carrots, garlic, onions, and other tubers.

CONVEYOR BELTS

Coveser's conveyor belts represent a versatile and functional solution for the efficient handling of bulk products in the agri-food sector.

Designed to optimize the transfer phases between processing and packaging lines, they ensure a continuous and orderly flow.

Available in powder-coated steel or stainless steel versions, with different types of belts (flat or inclined), they can be easily integrated thanks to their modular structure and the possibility of installing manual or pneumatic diverters.

Ideal for fruit and vegetable products, they offer delicate transport, safe and highly customizable.

TECHNICAL FEATURES

- Different types of belts (flat, inclined)
- Powder-coated/stainless steel structure
- Manual or pneumatic diverters
- Modular solutions for integration
- Easy cleaning and maintenance
- Customizable dimensions

ADDITIONAL FEATURES

- Easy integration into existing lines
- Speed regulator
- Ideal for fruit and vegetable products
- Electric power supply

SYSTEM ADVANTAGES

- ✓ Fast and smooth transport
- ✓ Maximum adaptability to the production line
- ✓ Reduction of consumption
- ✓ Automated control
- ✓ Maximum customization

Coveser's conveyor belts and diverters offer fast integration and maximum process flexibility.

SUITABLE PRODUCTS

Our conveyor belts can be used for the transport of various agri-food products, including tubers such as potatoes, carrots, and onions.

They can also be integrated into packaging lines to ensure efficient workflow management, guaranteeing excellent hygiene and preserving the integrity of products during transport.
